Chapter 1 Quick Start

Overview

The Camera Platform from Mark Roberts Motion Control fits the arm on Bolt family of robots including Bolt, Bolt X, Bolt Jr+ and Bolt Jr. The new camera plate is a universal mount for many of the commonly used cameras in the filming and broadcasting industry including Red Epic, Phantom Flex 4K, Blackmagic and Arri Alexa.

Depending on your camera and your requirement, your camera can be use to top-, side- and end-mount the camera on the robot arm.

Top-mounted camera

Side-mounted camera

End-mounted camera

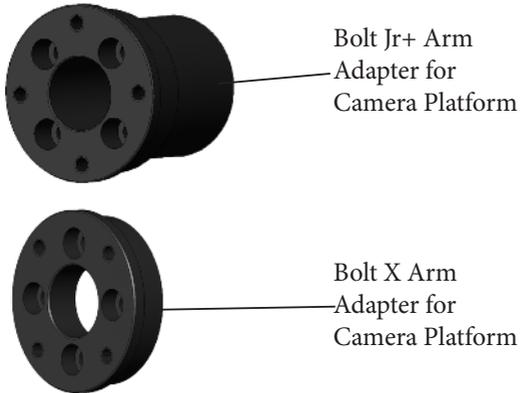

The new platform has additional mounting points which provide the camera positioning and extra clearance to position lens motors when required. The platform has two sets of 4x15mm and 4x19mm matte clamps when you want to switch between 15mm and 19mm matte bars. In addition, it has extra 19mm matte bar holder in the front for extra support for longer or heavier lenses. Note that the Camera Platform does not include matte bars itself.

Note

The Camera Platform is not in the Bolt family of robots' rig models for versions prior to Flair v6.45. Contact MRMC at support@mrnico.com to obtain the correct rig model for your robot.

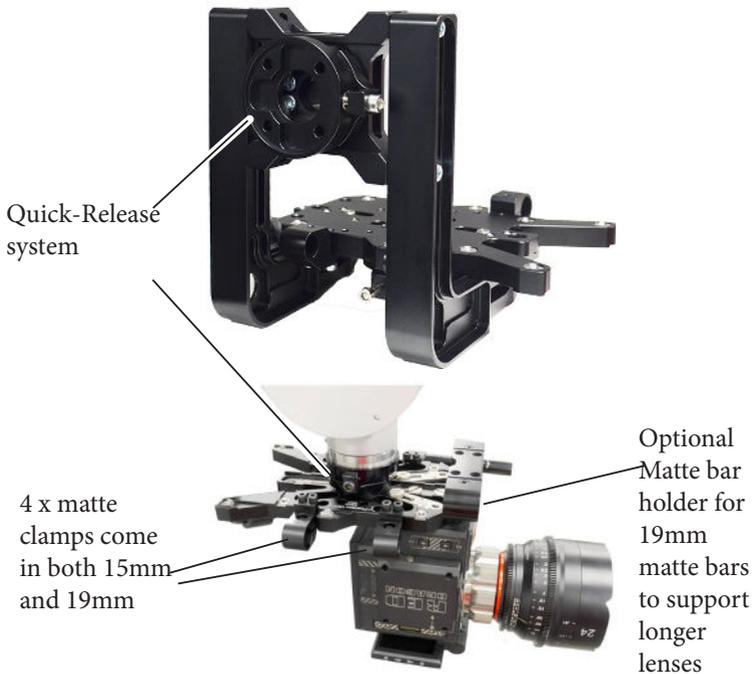

Camera Platform Adapter for Bolt Jr+ and Bolt X

An **adapter** is first attached to the arm of the Bolt Jr+ or the Bolt X robots using 4xM6 screws before the Camera Platform can be mounted on it using the Quick Release system.

Quick-Release System

The Bolt Camera Platform can be easily mounted on the Bolt arm using the Quick-Release system.

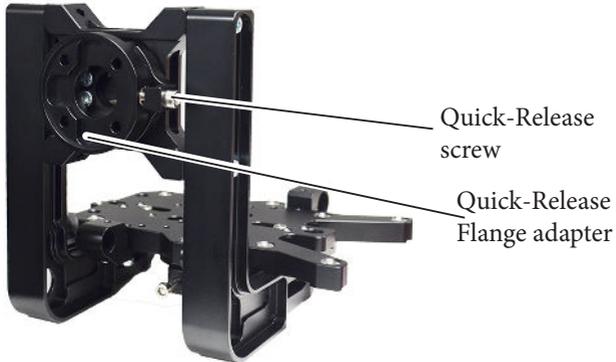

The Quick Release system can be mounted to any of the Bolt family of robots with the help of a Flange Adaptor that is

However, for sturdy shots such as those for macrography, you can remove the Quick-Release system from the camera plate and mount the Camera Plate directly to the Bolt arm using 4xM6 screws.

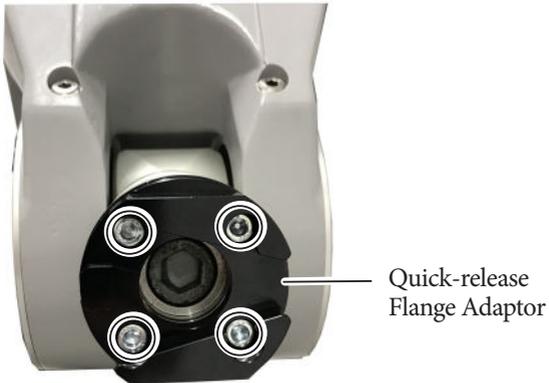

Mounting the Quick-Release Flange Adaptor

1. If the Quick-Release Flange Adapter is not already mounted on the arm, release it from the camera platform by unsewing the Quick-Release screw.

2. Attach the Quick-Release Flange Adaptor to the Bolt arm using the 4xM6 screws.

Mounting the Camera on the Camera Plate

1. Using an allen key, remove the camera plate from the L-bracket by removing the 4xM6 screws.

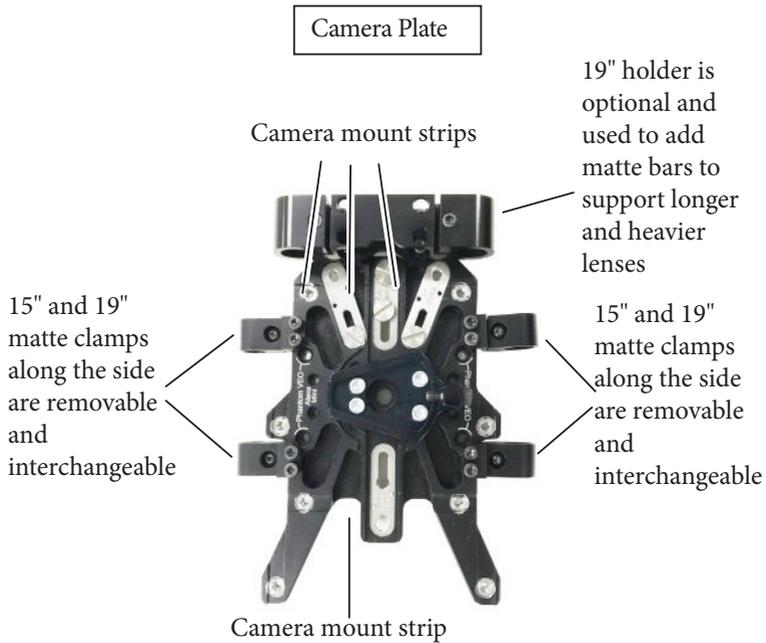

Hint

There are slots in the L-bracket and camera plate labelled '**store**' to store screws for safekeeping.

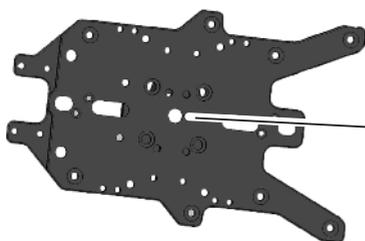

Screw store

The camera fits on to the Camera plate, which fits on the L-bracket sideways.

2. Mount the camera on the Camera Plate by aligning your camera with the slots in the camera mount strips and then tightening the UNC camera screws. There are both $1/4$ " and $3/8$ " camera mount strips which can be swapped to fit most cameras

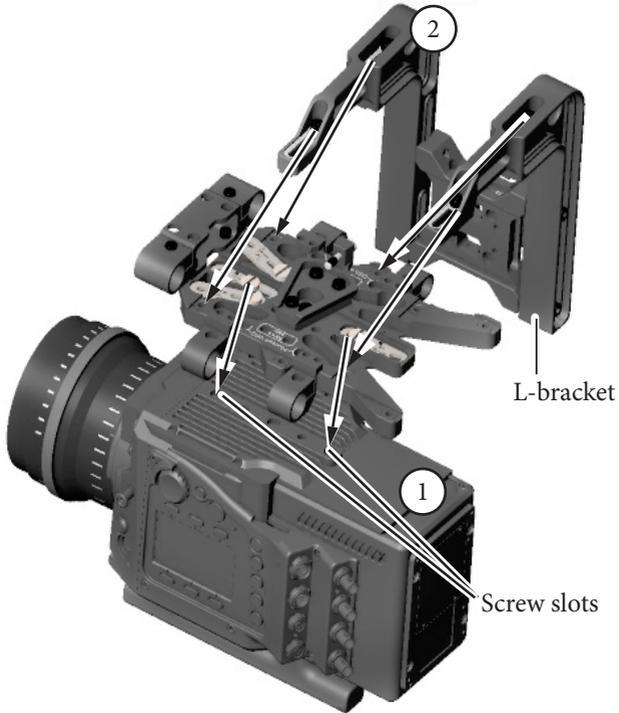

3. Slide the mounting plate into the flange adaptor in the arm and tighten the M6 quick-fix screw.

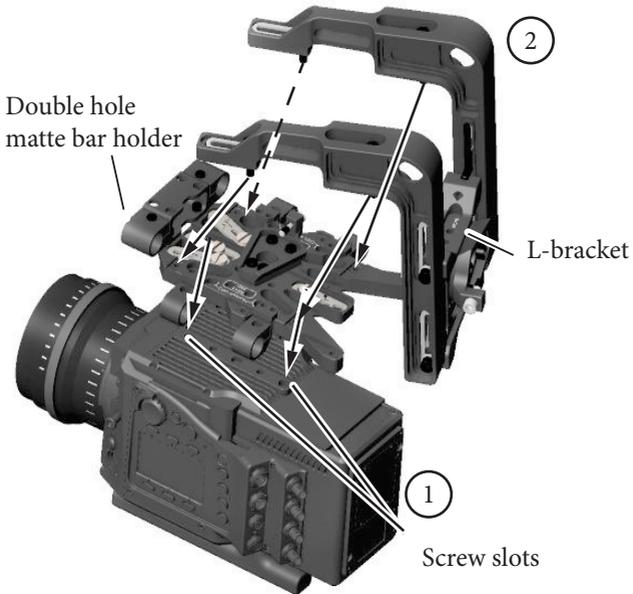

Side-Mounting the Camera on the Plate

1. Mount the camera on the camera plate.
2. Fix the L- bracket on to the camera plate sideways using the 4xM6 screws and washers.

End-mounting the Camera on the Plate

1. Mount the camera on the camera plate.

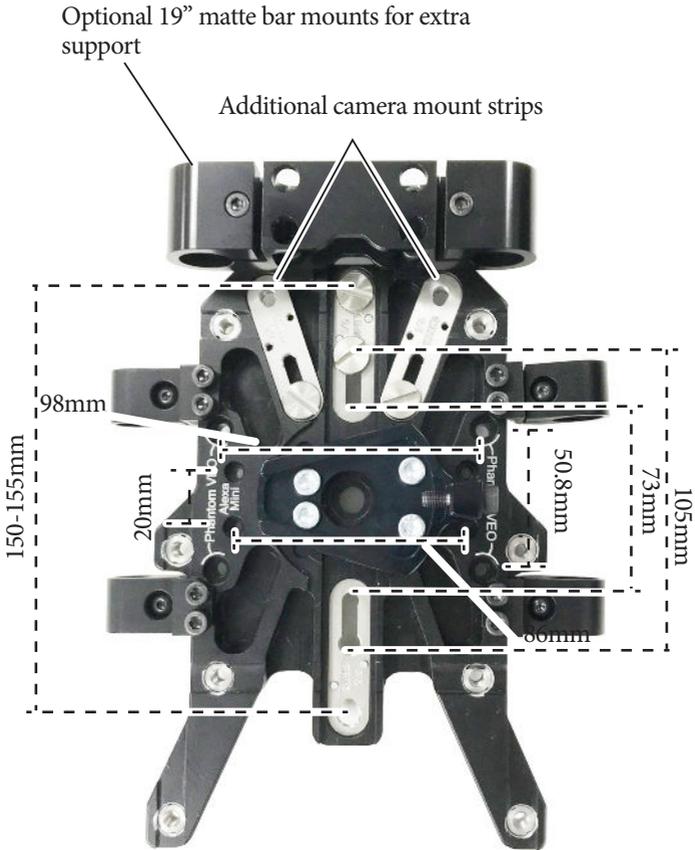

2. Mount the L-bracket on the camera plate such that the double hole matte bar holder is under the ends of the L-bracket. Tighten the 4xM6 screws and washers.

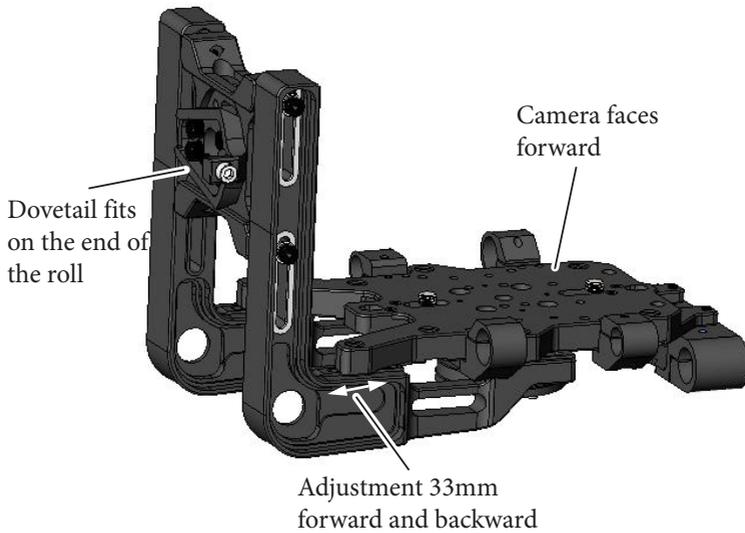

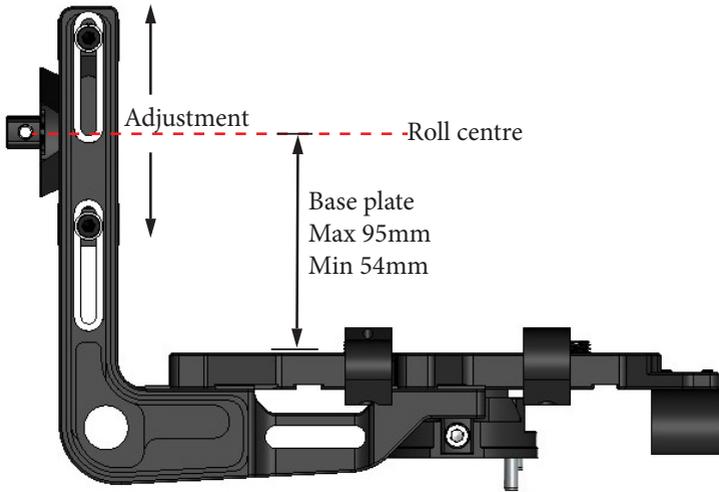

Mounting the Camera Bracket on the arm

Once the camera has been side- or end-mounted on the Camera Plate and added to the bracket, the Camera Bracket can be mounted on the arm by aligning the adaptor in the L-bracket with the Dovetail Flange Adaptor in the arm.
